                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                    The present invention relates to human METH1 and METH2, (ME for metalloprotease and TH for thrombospondin; see AAB50002 and AAB50003).

The present sequence is an expressed sequence tag (EST) for METH. METH can be used for inhibiting angiogenesis in an individual, and for treating cancer, benign tumours, an ocular angiogenic disease, requing cancer, benign tumours, an ocular angiogenic disease, rehumatoid arthritis, psoriasis, delayed wound healing, endometriosis, vasculogenesis, granulations, hypertrophic scars, nonunion fractures, scleroderma, trachoma, vascular adhesions, myocardial angiogenesis, cerebral collaterals, arteriovenous malformations, ischaemic limb angiogenesis, Osler-Webber syndrome, plaque neovascularisation, telangiectasia, heamophiliac joints, angiofibroma, therowical dysplasia, wound granulation, Crohn's disease or atherosclerosis. METH can also be used in birth control. METH can also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GTCAAGTTCCACGCCCGCACCTGGAACATTATCTGCTGACGCTGCTGGCAACGCCGGCG 750. ,
